Maryam Nasir

SUMMARY

Software Engineer with hands-on experience in AI-driven healthcare applications, full-stack development, and software quality assurance. Skilled in manual, functional, regression, and API testing, with additional expertise in code-level validation, debugging, and basic test automation. Leveraging a strong development background to identify defects, improve test coverage, and deliver reliable software solutions.

EDUCATION

MS Computer Science | UET, Lahore, Pakistan *Jan 2025 - Present*

Courses: Advanced Operating Systems | Theory of Computation | Advanced Computer Architecture | Advanced Algorithm Analysis | Intelligent Agents | Deep Learning | Internet of Things | Advanced Cryptography

BS Computer Engineering | UET, Lahore, Pakistan *2019 - 2023*

WORK EXPERIENCE

Software Engineer | CureMD, NY, USA (Based in Lahore office) *Aug 2024 - Present*

- Engineering high-performance, HIPAA-compliant, AI-driven healthcare ecosystems (AI Medical Scribe), integrating LLM agents to automate patient interactions and clinical workflows.
- Designed and deployed LLM-based clinical systems (AI Medical Scribe, CureDoc), optimizing inference efficiency, latency, and resource utilization in real-world healthcare workflows.
- Leading full-stack development of secure, AI Powered EHR integrations (C#, Angular) and contributing to Agile teams, DevOps (CI/CD, Jenkins, AWS), and architecture design.
- Alongside development responsibilities, contributed to QA activities through manual functional, smoke, and regression testing of EHR features, documenting defects and verifying fixes.
- Leveraged hands-on software development experience (C#, Angular) to support white-box testing, code-level validation, branch coverage analysis, API validation, and debugging, enabling early defect identification and effective collaboration between development and QA teams.

Software Engineer | MA Health House, Australia *Feb 2024 – July 2024*

- Architected the Doctor Help telemedicine ecosystem, a privacy-centric platform integrating secure WebRTC video and AI-assisted clinical workflows to enhance diagnostic decision-making. (Remote Job)

QA BOOTCAMP & TRAINING

- Participated in CureMD's QA Bootcamp (2024), delivering training to at least 50 participants on software testing fundamentals and practical QA workflows.

SKILLS

Languages: Python, C++, C#, Java, SQL

ML/DL/LLM: CV, NLP, Optimization, algorithmic efficiency, Multimodal, Resource-Constrained and Trustworthy ML

Frameworks/Tools: PyTorch, TensorFlow, NumPy, Pandas, OpenCV, scikit-learn, vLLM

Web Development: HTML5, CSS3, Bootstrap, JS, WordPress, Flask, MERN, ASP.NET, REST APIs, MySQL

QA / Testing: Manual Testing, Functional Testing, Smoke Testing, Regression Testing, Integration Testing, API Testing (Postman, REST APIs), Test Case Design & Execution, Defect Tracking, SDLC, STLC, Basic Automation (Selenium, Java), White-Box Testing

Other: AWS, Git, Linux, Bash, LaTeX, Jupyter

PROJECTS

Web Application	Career Fair Web Application	(MERN, REST APIs, Git)
AI/ML	Face Mask Detection	(Python, CV, OpenCV, PyTorch, Flask)
Data Mining/AI	Traffic Sign Classification	(Python, DL, CV, TensorFlow)
Data Bases/AI/ML	Webpage Phishing Detection	(Python, NLP, scikit-learn, AWS, Google Colab)
Automation	Electronic Code Lock System Using PIC Microcontroller	(PIC Microcontroller, MPLAB, C)
Management	Library and Pharmacy Management System	(Java, SQL, OOP)

OTHER

BS Thesis	Pakistan Sign Language Recognition using DL and CV for deaf people.	2023
Conference	Managed the "16th Int. Conference on AI" as a Director of ACM UET CHAPTER.	2022
Scholarship	Merit based scholarship for 4 years from Government of Punjab, Pakistan.	2015-2019
Professional Training	QA Bootcamp (CureMD) | Manual Testing | API Testing | Test Automation Fundamentals	2021-2025
